how to run esp32

1- First we connect the piece with the device

2- we must be sure that the wisdom piece is working by program the piece in which producing the light .

3- Download Arduino IDE

4- We have to define the piece on the device (esp32) if it's not, from tools go to board manager then type esp32 then install

5- From tools go to board then ESP32 Arduino then choose WEMOS D1 MINI ESP32

6- From file choose examples then choose blink then it will open the page with code that contains the command that turns the light on and off (as we said in step 1) .
